

# ECHO SHUTTER BLIND

## Perfect Fit Shutters

### Measuring Guide

#### Make sure to record all measurements in millimetres

1. Measuring from gasket to gasket take 3 measurements from the bottom, middle and top of the glass size width and make a note of the smallest measurement accurate to the nearest millimetre. (Fig.1)
2. Do the same for the glass size height, taking measurements from the left, middle and right of the glass and making a note of the smallest measurement to the nearest millimetre.
3. Place a credit card over the corner of the window where the glass meets the gasket and take a note of the measurement from the glass to the edge of the card, this will be your bead depth and will determine what size bracket to use. (Fig.2)
4. Repeat steps 1-3 for the top window. (Fig.3)
5. If the window has a handle then take a measurement from the left hand gasket to the centre of the handle plate and make a note of the measurement. (Fig.4)

Please Note: ECHO Perfect Fit Shutter Blinds are only suitable for ball nose and chamfered beads.  
This product is not suitable for square beads
